Product Schedule

Sattari · Systems Ontology · Version 1.0, November 10, 2026

This Schedule sets out, for each product, its milestones in order and the elements of each deliverable.

Every product

First Deliverable. Milestone 1 of every product. It contains the purpose and boundary judgment and the access inventory, or, where the engagement cannot proceed, a statement of the reason. Where the size of the system calls for an interim milestone, the First Deliverable establishes it.

Interim deliverable. A report of progress against the access inventory.

Draft report. Contains the elements this Schedule lists for the product's report.

Final Report. The deliverable of the last milestone. It contains the elements this Schedule lists for the product's report. A working session (for a Grade, a briefing) is offered on its delivery and is not a condition of its acceptance.

The Reading

1. First Deliverable
2. Draft report
3. Final Report

The report contains an account of the system as a whole, read against its purpose, and any findings, each located and classified by its nature, with the direction of its remedy.

Fault Investigation

1. First Deliverable
2. Draft report
3. Final Report

The report contains, for each fault found, its location, its nature, its classification as contained, structural, in the system's purpose, or outside the boundary, and the direction of its remedy. Where no fault could be located, it contains the extent of the investigation.

The Grade

1. First Deliverable
2. System map
3. Draft report
4. Final Report

The system map contains the reachable components and relations of the system within the boundary, as found.

The report contains scores for the components and relations in the system map as it stands after review; a profile by function and an overall grade, with any cap or ceiling and its reason; and any findings, each located and classified by its nature, with the direction of its remedy.

Design Derivation

1. First Deliverable
2. Derived arrangement in outline
3. Draft report
4. Final Report

The derived arrangement in outline contains the functions derived from the purpose and their arrangement, set beside the current or proposed arrangement.

The report contains an arrangement derived from the purpose; where the current or proposed arrangement departs from it; and which departures are structural.
